# Technical Reference - Q&A

1. Q: Why my P55 chipset motherboard cannot boot up, the Dr. Debug LED display shows error code "E8".

   A: Due to the Chipset spec., please insert the memory module into the white slot (DDR3_B1) which is nearly CPU socket for the first priority.

Please insert your DRAM in this slot for the first priority.

2. Q : Is there any possibility to disable the LED of ION 330 ?

   A : Yes. Please update your BIOS to P1.60 first. After doing so, you may find the "Good Night LED" option in BIOS -> Smart, please refer to the following picture.

If you set "Good Night LED" to [Enabled], the system would turn LED off.
